Agricultural Research Troubsko Showcased Its Activities at Mendel AGRO Field Day 2026

Agricultural Research Troubsko traditionally participated in the Mendel AGRO Field Day 2026, held on Friday, June 5, at the experimental field station in Žabčice. Organized annually by Mendel University in Brno, the event provides a platform for researchers, farmers, students, and the general public to meet and exchange knowledge on the latest developments in agricultural research and practice.

Visitors to the Agricultural Research Troubsko exhibition stand had the opportunity to learn about the institution's research results through professional publications and methodological guidelines. Current research projects, field experiments, and other activities focused on the development of modern and sustainable agriculture were also presented.

"The Mendel AGRO Field Day is an important opportunity for sharing knowledge and experience between research institutions, agricultural practitioners, and students. We highly appreciate the interest shown by visitors in our work and the opportunity to present results that can be applied in agricultural production," said Jakub Prudil of Agricultural Research Troubsko.

The presentation also included samples of seeds from the institution's developed varieties as well as promotional materials introducing visitors to the organization's activities and long-term research focus.

Agricultural Research Troubsko would like to thank the organizers for the invitation and all visitors for their interest. The next opportunity to meet representatives of the institution will be at Dni poľa 2026, an agricultural exhibition taking place on June 9–10 in Dolná Krupá, Slovakia.
