Agrishow 2026: Research in Troubsko presented innovations and participated in the award-winning methodology

The Agrishow 2026 agricultural and forestry fairs were concluded at the Brno Exhibition Centre. Among their traditional participants was a research institute from the Troubsko region, which has been presenting itself here for several decades. As part of a joint exhibition with other private research organisations, it presented the latest research and breeding results.

Visitors had the opportunity to get acquainted with new technological procedures in agrotechnology and plant protection, new varieties and the long-term Czech Bumblebee programme. The main innovations of this year included the technology of thermal seed treatment, intended not only for the physical sanitation of seeds of various crops, but also for the treatment of mercantile grain. This technology will be subject to extensive pilot testing this year.

One of the exhibits on display received a significant award – a certified methodology created under the leadership of colleagues from Agritec Šumperk, in the development of which researchers from the Troubsko region also participated. This output was awarded the Gold Medal and represents another example of close cooperation between private research institutions.

According to the organizers, 85,000 people visited the fair over four days. The event thus once again confirmed its role as an important platform for transferring research results into practice. The exhibition also became a place for expert discussions with important guests on the direction of the Czech research environment.

The stand was visited by the Deputy Minister of Agriculture, Ing. Jaroslava Špalková, the Chairwoman of the Agricultural Committee of the Chamber of Deputies of the Parliament of the Czech Republic, Ing. Monika Oborná, and the Chairwoman of the Agricultural Committee of the European Parliament, Ing. Veronika Vrecionová. Representatives of the research institution greatly appreciate these visits.
