Science Night 2026 at the National Museum of Agriculture Showcased Research from Troubsko

On Friday, 25 September 2026, the traditional science popularisation event Science Night took place at more than one hundred locations across the Czech Republic. This year's event focused on the theme "Communication", highlighting the many ways in which information is exchanged in nature.

The programme at the National Museum of Agriculture in Prague also featured the Research Institute for Fodder Crops, Ltd. and Agricultural Research, Ltd., both based in Troubsko. The presentation focused on communication between plants and their pollinators and on the importance of these relationships in nature.

A quiz for children and adults gave visitors the opportunity to test their knowledge of plants and pollinators. Bumblebees also attracted considerable attention. Visitors could see a bumblebee nest up close and learn more about the life of bumblebees, their importance for pollination and their role in nature.

The presentation attracted considerable interest throughout the evening. Families with children, school pupils, students and adult visitors came to learn more about the topic. Researchers answered questions and introduced visitors to the world of plants, pollinators and scientific research in an accessible and engaging way.

This year's Science Night offered visitors an opportunity not only to learn more about communication in nature, but also to meet researchers and gain insight into the topics addressed by their research.
